

Anivac Bathing System Specifications:

- 6.5 litre solution tank
- 7.0 litre recovery tank
- Oscillating pump
- 2 stage vacuum motor with:
 - Water lift 2,100mm
 - Pressure – 56 psi
 - Hose assembly 3.5m
- Splash-proof clear tank lid
- Heavy-duty latches
- Voltage 120v
- Power consumption:
 - 1100 watt vacuum
 - 50 watt pump
- Air filter HEPA
- Weight 13kg
- 1 Year Warranty
- Ultra heavy-duty poly housing

Clean your animal the easy, portable, mess-free way without using volumes of water. Anivac cleans from the skin up!

Traditional means of cleaning involves vigorously shampooing the outer coat to get at the dirt and sweat resting on the skin. Thoroughly rinsing away the soap scum and dirt then takes a large volume of water.

Unlike a carpet cleaner (that cleans from the top down by spraying onto a carpet) Anivac's patented design penetrates even the thickest animal coat with nozzles that direct pressurised oxygenated cleansing fluid directly onto the skin. The spray action washes the skin first, then cleans the coat as the solution, dirt and loose hair is vacuumed up by the wand.

An added benefit of the vacuuming action is that it pulls the majority of the water from the coat, leaving the animal only damp to the touch. This substantially speeds up drying times and leaves the work area virtually dry and free from hair.

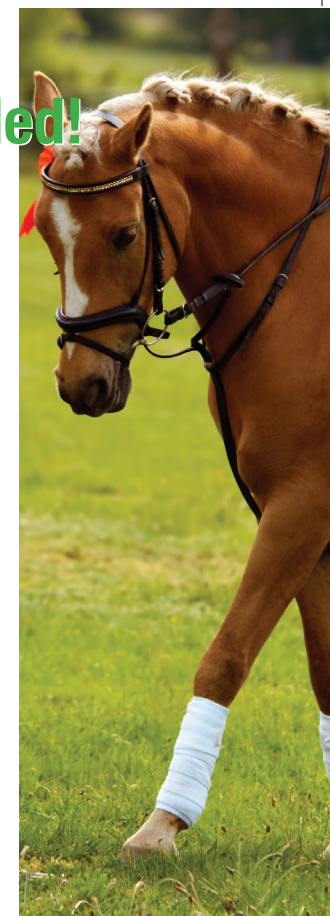

WASH WITH THE POWER OF PURE OXYGEN!

We recommend the use of Anivac PURE OXYGEN Shampoo in the system to not only make your best friends coat shine but also as a preventative... and for those nasty times when problems arise, turn to PURE OXYGEN Fungal Wash for help.

Get your stables Anivac enabled!

Compared to traditional bathing practices, the Anivac system provides:

- **Deep cleaning** – clean from the skin up and get all the dirt out of your horses coat. The vacuum effect also helps to remove that pesky winter coat.
- **A drastic reduction in mess** – Anivac removes the majority of water and hair before it has a chance to fall away from the horse leaving the groom dry!
- **Environmental benefits** – an average sized horse can be cleaned with approximately 8 litres of water. Compare this to a running hose the puts out on average 20 litres of water a minute and you'll realise how much water you'll save. Saving about 90% on water usage not only reduces mess but greatly lessens the load on well and septic systems.
- **Portability** – two of our models are completely portable making it easy for you to take one to shows or other events. No more waiting for wash stalls or standing in mud!
- **Safe cold weather washing** – due to the small amount of water used and immediate removal of the majority of it from the horses coat, with common sense precautions you can safely wash your horse in cold conditions.
- **A reduction in skin conditions** – dirt on your horses skin is the breeding ground for many skin problems. Being able to keep your horses coat clean year round, right down to its skin, will help prevent these bacterial and fungal conditions from taking hold.
- **Improved winter protection from cold** – a horses coat insulates by trapping air between the shafts of hair. The more dirt that is in your horses coat the less air the hair can trap, reducing its insulating value. Keeping your horses coat clean year round helps your animal stay warm and cozy.
- **Stain removal** – finally, an answer to the removal of stains from light coloured horses! Simply reach for the Anivac when you see a fresh stain and spot clean the area.

Anivac deep cleans from the skin up, removing dirt and leaving a clean, glossy coat.

Veterinarian applications

- **Pre and post surgery cleaning** – Anivac makes it possible to clean around wounds sites fast and effectively, reducing exposure to infection and trauma to the animal.
- **No bathtub required** – Anivac can be easily moved from pen to pen, or room to room in your facility, making it particularly suitable for cleaning immobile animals that may have soiled themselves.
